
Shipconstructor 2012 Full ((FULL))

the client could then easily import those drawings and use them to create its own set of plans for the client's own use (as it would have done had they been done in autocad or another cad system). the fact that the drawings were created from within the shipconstructor environment, made them much easier to maintain and modify and significantly reduced the possibility of getting the drawings mixed up with the client's own plans. the project also provided the client with the ability to work at a level that was more closely aligned with the basic facility constraints of the business. the client was able to work in the shipconstructor environment and use the tools in the shipconstructor environment to create the drawings and then hand these drawings off to the facility for installation. the facility could then generate reports from those drawings, send the drawings to an autocad erp system, and so on. when you are able to achieve those goals, the bottom line is that your clients are able to take advantage of the benefits that are available in the shipconstructor environment. they are able to specify drawings in a format that is easily transported to facility, they are able to work at a level that is more closely aligned with the basic facility constraints, they are able to generate simple models for client approval, and they are able to do so in an environment that is easy to manage and track. this is true when you start with a blank sheet of paper and you get the project completed. but the true test comes when you can apply those same tools to the same project when you have a similar project already in process and you can do so at a time that is most convenient for the client. this is exactly what ssi was able to do with this project.

Shipconstructor 2012 Full

technology, in and of itself, is rarely a significant hurdle. modern erp systems have more than enough capability to integrate with cad programs. in reality, the most important factor for successfully integrating cad with erp is having a clear, documented understanding of the business processes that the erp system is intended to support. in other words, you have to know what the beast likes to eat and what it needs to keep it happy and healthy so it doesnt come back and bite its owner. ssi is a proud sponsor of autodesk university 2012, and will be showcasing some of its innovative autocad based cad/cam products at the event, including shipconstructor. this autodesk based software solution makes it easier to create ship design models and use them in industry, making it more cost-effective and effective for shipyards to build and use, which helps to make the construction and operation of ships more efficient and cost-effective. contacteric monierproduct development managetel: 250-478-4854email: eric.moniersji-corporate.com>eric.com ssi develops autodesk based solutions for the shipbuilding and offshore industry including: shipconstructor software, an autocad based cad/cam product line; and enterpriseplatform, a tool for sharing product data model information. ssi solutions take advantage of the native dwg platform and the global pools of experience provided by the world's most popular cad platform. we are pleased to announce that the next release of shipconstructor will be available for download in august. this release will include the following features:

- o new, interactive gui for the shipconstructor commando
- support for cutting parts from a profile rather than just edgeso
- support for multiple label styleso
- support for labelling to the edge or centre of a componento
- support for full 3-d labelling to an offset locationo
- adjustment for the baseline of a part 5ec8ef588b
