Use the new Hierarchy View, Top Down Editing. Top-down editing gives you the freedom to create and edit an assembly in a variety of ways. It's perfect for certain tasks, like making a simple modification to a single component or creating a cut-list. Inventor 2018 is the first release of the Inventor toolset to fully support Hierarchy View. Inventor 2018 represents an end-to-end transition from 2D to 3D-centric manufacturing. Inventor is now fully-capable of 3D model creation, 3D simulation, 3D print and 3D assembly. The new Inventor 2018 Hierarchy View, Top Down Editing lets you create and edit your parts, subassemblies, assemblies, and even their individual components from the top down for an entirely new level of intuitive design experience. This new design flow gives you the ability to create, edit, and debug in a multi-view workspace, allowing you to see your design in 3D while editing it in 2D. You'll find elements like Sweep, Extend, and Cite active drawing tools in all views. These elements extend the area of an existing part or allow the part to align with another part. New features in Inventor 2018 also bring more complete accuracy in measurement of the 3D shape of the part or subassembly, making it easy to reposition parts for 3D print. By following the outline of a component or part, you can plan multiple print paths and even place a previously defined part on a toolpath. You can even use an Inventor Clip to snap a new part to a previous designed part. Inventor 2018 also adds new tools like Fit and Link, Save Snippet and Project. Add/Edit Inventor template files, our modified version of the MPX file. Launch the CAM browser to see the new CAMAPI for the CAM Editor, which now works with DraftSight for the CAM Browser. Fix issue with the CAM API and 2016 PowerTrace language for CAM Browser. 5ec8ef588b
