Photoshop's sophisticated tools continue to provide new capabilities. One example is a new Scripting feature that enables you to use JavaScript commands traceable in the code on the screen to customize Photoshop's tools to do specific actions. If you like Photoshop's built-in image editor, though, or just want to save time, you can save a.psd file inside the app with a few clicks and then use it as a template for your final image with Photoshop itself. Now you can invite others to comment on your Photoshop document in real time from within the Photoshop interface. You don't need assistance from this program to comment, and you can see the comments as they are made.
